

POWERING 2085

You could think about:

- What new energy sources might we discover or invent?
- Will we still use fossil fuels, or only clean energy?
- How could cities, cars, and homes be powered differently?
- Could we store energy in new ways, like using air, water or movement?
- What will power technology in places with no access to electricity today?
- Will we all generate our own energy at home or school?

Your first name _____

Draw, design, or write how you think the world will look in 2085:
